DETAILED ACTION

Further restriction to one of the following inventions is required under 35 U.S.C. 121 in view of the claims presently presented as follows:

- III. Claims 1 and 6-8, drawn to a composition for being applied to a breast nipple in preparation comprising various combinations comprising at least two of the following: an orifice-dilating agent, a vasodilator, a muscle-relaxing agent, muscle-constricting agent, a lactation-stimulating agent, a secretion-stimulating agent, a sphincter-relaxer, an anti-ischemic agent, a calcium channel blocker, a dye or stain, classified throughout in class 514.
- IV. Claims 9 and 10, drawn to a ductal access tool for collecting fluid and a composition, classified in class 604.

Inventions Group III and Group IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different modes of operations and different effects. The invention of Group III is related to a composition comprising combination of various active agents which have different known effect while the invention of Group IV is requires a ductal access tool in combination with the composition of various active agents that are known to administer without the ductal access tool. Moreover, these inventions have acquired a separate status in the art as shown by their different classification. The require literature search would

place undue burden on the Examiner. Therefore the restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

If Applicants elect Group III, Applicant is required to elect a single combination of species since the Group contains claims directed to the following patentably distinct combinations of at least two species of the claimed invention: an orifice-dilating agent, a vasodilator, a muscle-relaxing agent, muscle-constricting agent, a lactation-stimulating agent, a secretion-stimulating agent, a sphincter-relaxer, an anti-ischemic agent, a calcium channel blocker, a dye or stain. Applicants are required under 35 U.S.C. 121 to elect a single disclosed combination of the species, even though this requirement is traversed.

Applicants' arguments with respect to claims 1,6 and 8-10 have been considered but are moot in view of the above restriction requirement.
